START HERE

Using your user manual

A dedicated guide for customers.

Edition and release scope
Prepared 4 November 2026 for the current local customer-login application. Recent features described here are local changes, not proof of deployment. Confirm the matching release before production use.

Access	Address / purpose
Production portal	https://gstreturns.primeserve.in/ - use when the matching release is deployed.
Local testing	http://127.0.0.1:8086/ - only on the computer running the local server.
Your workspace	/account for customer balance, billing, refunds and privacy.

Who this manual is for

This guide explains how to register, manage your account, pay, request GST documents, manage consent and ask for a refund. You cannot approve payments or change your own billing mode, rates or credit limit. Contact support when an Admin decision is required.

How to use the steps

Open a heading to expand its controls. Follow the numbered instructions and read the success/error popup. Table dates use Indian Standard Time (IST), including both dates in a range. Amounts are INR. Current client rates and price confirmation determine the payable charge.

Safe handling
No passwords, API tokens, OTPs or real customer financial records are included. Protect downloaded GST data and never send credentials in a support email.

CUSTOMER GUIDE

Your first successful request

From a verified account to a document saved on your device.

1. Choose **Create an account**. Enter required details, read the Privacy Notice, tick consent and send the email verification OTP.

2. Verify the email OTP. Registration completes without Admin activation; log in separately.

3. Open **GST Services**, the default landing page. New customers are PREPAID. Check balance and rates in **My Account**.

4. If needed, scan the UPI QR, pay, submit amount and UTR, then wait for bank verification and approval.

5. Select a service. Returns require GST OTP connection and return/period selection. Challans and certificates use their own credential form.

6. Review and confirm the charge. Follow processing where jobs are created, then save the ZIP, challan JSON or certificate PDF.

Two different OTPs
Registration OTP verifies your email. GST OTP authenticates your GST account. They are separate codes and cannot be used interchangeably.

Navigation	Purpose
GST Services	Return, monthly challan, yearly challan and certificate requests.
My Account	Wallet/credit, current prices, payments, history, refunds and consent.
Profile / Logout	Profile opens account details. Logout ends the portal session and clears a temporary postpaid API key.

On a phone or tablet, use the same steps. Wide tables may scroll horizontally. Find downloaded files through the browser download list or device Files/Downloads app.

CUSTOMER GUIDE

Register, verify and sign in

No manual Admin activation after successful verification.

Required details

Enter Full Name, Company Name, Email Address, Indian Mobile Number, Password and Confirm Password. Company is mandatory. The phone form permits 10 national digits starting with 6, 7, 8 or 9; repeated identical digits and full ascending/descending sequences are rejected. Storage is normalized with +91. Format validation does not prove mobile ownership.

1. Use an email you control. Existing normalized email/mobile details cannot create another account.

2. Choose a strong unique password and confirm it exactly. There is no 12-character minimum in the current form; do not choose a weak password.

3. Read the Privacy Notice and tick the unselected consent checkbox yourself.

4. Choose **Send verification OTP**. Enter the latest six-digit email code and choose **Verify and register**.

5. After the registration-complete popup, log in with email and password. Registration does not automatically log you in.

OTP control	Behavior
Validity	5 minutes. Expired codes require a fresh OTP.
Attempts	At most 5 incorrect attempts; used codes cannot be replayed.
Resend	Wait 60 seconds; at most 3 sends per email per hour, with other security limits also applying.
New code	Invalidates the previous code. Submit registration again to resend.

PREPAID billing is assigned automatically. Signup bonus depends on the offer being active when verification finalizes; it is not a bank payment.

Use **Forgot password?** for a reset email. Complete the link and set a new password; reset ends existing customer sessions. Never email a password or OTP to support.

CUSTOMER GUIDE

Privacy consent: one time

Consent is remembered for the stated purposes, not requested every login.

1. Read the linked Privacy Notice at registration and tick consent. The backend records purpose, notice version, wording and time when email verification succeeds.

2. Existing customers with no recorded consent are directed once to **My Account > Privacy & Consent** before using GST services.

3. After saving consent, no repeat tick is needed for ordinary logins, requests or downloads for the same purposes. It is stored in the account, not just browser storage.

Withdraw consent

Open **My Account > Privacy & Consent**, select **Withdraw consent**, read the explanation and confirm. GST services pause; saved GST connections are removed. The worker cancels uninitiated queued returns and releases their reservations, and pauses further monitoring. A request already sent upstream cannot be recalled.

Give consent again

In the same section, read the notice, tick consent and choose **Save consent**. **No Admin approval is required.** Services become available again. You may need a fresh GST OTP connection because the old saved connection was removed.

> **Account access remains**
> Withdrawal does not automatically close the account, send a refund or erase financial records. Account, billing and refund access remain. A blocked account is different: Admin must unblock it before login.

A new processing purpose or materially expanded use requires fresh consent for the relevant version. Use another person's GST data only with appropriate authority; your own registration checkbox does not provide that authority.

For privacy access, correction, erasure or other help, email **support@primeserve.in**. Account, consent and financial retention are separate from the short document-download window.

CUSTOMER GUIDE

Your PREPAID wallet and prices

Know the difference between available balance, credits and charges.

Card / section	Meaning
Available Wallet Balance	Amount available to spend after current holds/reservations.
Signup Bonus Credits	Promotional credits awarded, not a separate refundable cash balance.
Paid Wallet Credits	Approved payment-credit history, not necessarily unused refundable funds.
API Charges	Finalized prepaid charges; pending reservations are separate history.
Add Money / History	Payment instructions, references, ledger credits, deductions and releases.

Default price examples

Billable unit	Before GST	GST 18%	Total
Accepted return type / month	₹3.00	₹0.54	₹3.54
Successful monthly challan retrieval	₹3.00	₹0.54	₹3.54
Successful yearly challan retrieval	₹35.00	₹6.30	₹41.30
Successful certificate retrieval	₹2.00	₹0.36	₹2.36

Admin can change standard rates or assign a protected special rate. Review the charge confirmation before every paid request. Some existing account table headings use Gross for the before-tax value and Net for the final value. Identify amounts by the arithmetic: before-tax amount + GST = total payable.

Reservations and tax

The payable total is reserved from the wallet. Uncertain outcomes can remain held for Admin review; do not start another charged call blindly. Negative balances and duplicate request deductions are prevented.

Top-ups are not taxed again
In this portal, top-up credit equals the verified paid amount with ₹0 additional GST at top-up. API consumption is charged with GST separately. Do not add another 18% simply to load money into the wallet.

CUSTOMER GUIDE

Add money with the UPI QR

Pay externally, submit the reference, then await Admin verification.

1. Open **My Account > Add Money** and check the current payee name and UPI ID.

2. Scan the QR in your UPI app, or use **Open UPI App** on a supported device. Enter an amount and verify the recipient in that app.

3. Complete payment outside the portal. Keep its UTR/bank reference.

4. Enter the paid amount and UTR in the portal; choose **Submit for verification**.

5. The recharge is Pending. Admin independently matches the money received in the business bank account.

6. On approval, credit is added once. Check Recharge Requests and Wallet Transaction History; the result is also emailed.

> **Intended payment destination**
> 8368414690.1@hdfc - Primeserve Global Solution Private Limited. Admin can change payment settings; follow verified details currently displayed in the portal rather than relying only on an old manual.

Submission checks

The current form accepts ₹1 to ₹1,00,000 and a valid reference of 6-64 permitted letters, digits or hyphens. Duplicate UTRs cannot be credited again. Submission limits apply. A screenshot or typed reference alone does not prove receipt.

If payment is made but the wallet is unchanged

Confirm the reference was submitted in the portal. If pending, contact support with registered email, company, paid amount, time and UTR. Do not pay again only because approval is pending. Rejection does not automatically send a bank refund; resolve the reason with support.

A bank transfer alone does not create a portal recharge request. A promotional bonus or Admin grant is not an approved customer bank payment.

CUSTOMER GUIDE

Your POSTPAID account

Admin-approved credit and a temporary API key for each login.

Information	Meaning
Current API Consumption	Finalized postpaid usage this calendar month in IST.
Outstanding Amount	Amount owed, including active reservations until resolved.
Approved Credit Limit	Credit authorized by Admin.
Available Credit	Limit less outstanding, never displayed below zero.
Payment Terms	Days configured by Admin; not automatic collection.
Statements / Usage History	Monthly usage statements and request history.

API key once per login

1. Enter the current Primeserve key in **My Account > Update API Key** when requested.

2. The backend reuses it for the login session; it is not requested on every API call.

3. After key rotation in app.primeserve.in, update it here without logging out. Logout/session expiry clears the temporary server-side key.

Billing and payments

Admin records verified postpaid payments and controls rates, limits, terms and billing mode. A mode change ends sessions and requires a fresh login. Historical wallet, usage and outstanding records remain preserved.

> **Mode controls the display**
> Postpaid accounts hide prepaid wallet, signup-bonus and Add Money cards. Switching mode does not erase old wallet funds or debt. Ask Admin to reconcile preserved records.

A monthly usage statement is not automatically a statutory tax invoice or proof of payment. Use the invoice and settlement process agreed with Primeserve.

CUSTOMER GUIDE

Returns: connect your GST account

Portal sign-in and GST authentication are different steps.

1. Select **GST Return Download**. Enter GST username and GSTIN in GST Authentication.

2. Prepaid uses the secure backend key; postpaid uses the key supplied for that portal login.

3. Choose **Request OTP** and wait for the code through the registered GST channel.

4. Enter the latest GST OTP and choose **Connect GST**. Connection duration is fixed at 30 days; the user cannot change KeepAliveDays.

5. Wait for actual connection success. Return selection unlocks only when GST is connected.

Reuse a valid connection

Connected details show username, GSTIN and expiry. Reuse the current valid connection rather than requesting unnecessary OTPs. Use the disconnect/reconnect controls to change GST account. Disconnecting a saved GST connection does not close the portal customer account.

> **API access disabled**
> If prompted: "API access is not enabled for your GSTIN. Please log in to the GST Portal and enable API access under My Profile → Manage API Access, then try again." Complete that GST Portal step before trying again.

Connection errors

Check username/GSTIN, GST API access and latest OTP. An invalid/expired OTP, source downtime or provider validation can stop connection. HTTP 400 is not proof that every case is a wrong password. Read the popup and avoid exposing an OTP in screenshots or support emails.

Thirty days is the requested connection lifetime, not a guarantee the upstream GST system will keep authentication valid throughout. Reconnect if expired or revoked. Registration email OTP cannot substitute for GST OTP.

CUSTOMER GUIDE

Returns: monthly or financial year

Review the request count before confirming the cost.

Selection	Behavior
Return types	GSTR-1, GSTR-1A, GSTR-2A, GSTR-2B, GSTR-3B, GSTR-6, GSTR-6A and GSTR-9. Choose only what you need.
Monthly	Select Financial Year and Return Period / Month. API periods are generated automatically.
Yearly / Financial year	Expands the year into monthly requests and excludes future periods. It is not one annual API call.
Preview	Selected return types × included monthly periods = request count.

1. Choose Monthly or Yearly / Financial year, financial year and applicable month.

2. Tick individual types or use Select all / Deselect all. Check the preview.

3. Choose **Download Selected Returns**, read the price confirmation and confirm.

4. Watch jobs initiate sequentially. Each return/month keeps its own identifier. Failed requests do not intentionally restart completed ones.

Example

Three types for one month create three requests. Three types across a completed 12-month financial year can create 36 requests. At the example total ₹3.54 per accepted unit, that represents up to ₹127.44; actual billing follows individual outcomes and the client rate.

> **Source availability is not guaranteed**
> Yearly selection does not assert that every return type exists for every month or taxpayer. Annual or unavailable data may be rejected or reported as no data. Review each provider result.

The portal advances date options with the calendar in Indian time. Return financial years run April-March. MMYYYY identifies a month, for example April 2026 = 042026. Challan yearly selection uses calendar year instead.

CUSTOMER GUIDE

Track jobs and download return ZIPs

Each return/month keeps its own job ID and outcome.

Status	What it means / what to do
Queued / Initiating	Wait for sequential initiation. Avoid starting another request.
Processing	A job has been accepted; automatic status checks continue.
Completed	Use Download ZIP, or Download All Completed ZIPs for the batch.
Document not Available	Provider code 101 is displayed in readable form. It does not mean a ZIP exists.
No data / Failed	Read the reason. There may be no file; retry only if allowed and appropriate.
Review required / Timed out / Checks paused	A provider check or Admin review may be needed. Resume checks monitors an existing job; it is not a new initiation.

1. Use the **Batch** selector for the relevant request group. Check GSTIN, year, period and job ID.

2. Select a completed row's **Download ZIP**. A completed status alone does not mean the file is saved on your device.

3. Use **Download All Completed ZIPs** to collect completed original ZIPs inside one archive. Pending/failed jobs are not converted into files.

4. Check browser Downloads and save the files securely. Allow a legitimate download if blocked by browser settings.

> **The 10-minute timer**
> Each return expires 10 minutes after its first successful browser download confirmation, not after OTP initiation. That confirmation does not prove you opened or permanently saved the file. Save/check promptly. Undownloaded work has a separate 24-hour limit.

Page refresh during processing is supported through backend persistence within the session/retention window. A fresh login may need reconnection. An expired source link or removed job may require a new, potentially chargeable request.

CUSTOMER GUIDE

Download challans as original JSON

Monthly and yearly services preserve the actual response.

1. Choose **GST Challan Monthly** or **GST Challan Yearly** in Select GST Service.

2. Review Select Challan Period and Calendar Year; Monthly also needs Month. The API month period is filled as MMYYYY.

3. Enter the service's GST username, GSTIN and GST password. Billing uses the prepaid backend key or postpaid session key automatically.

4. Choose **Get Challan**, review the charge and confirm. Wait for the actual response.

5. Review the fields/status. JSON downloads automatically where permitted. Use **Download Challan JSON** again while the response remains visible.

What the file contains

Challan downloads preserve returned JSON. The structured field/value view is not a fabricated challan PDF and does not assume every response has identical fields. The current customer form does not offer an Excel/PDF format selector for challans.

No records or an error

An empty response may mean no records for that period. An API error is not a successful retrieval. Read returned status/message before another paid attempt; do not repeat only because you expected a different format.

> **Short-lived response**
> The GST password field is cleared on submission and is not saved as a retained GST password. The page response is cleared after 10 minutes or a service change. Save JSON before leaving; refreshing does not restore that browser response.

The GST service password is different from the customer portal password. Registration email OTP is not used in this form. Yearly challan uses calendar year; do not substitute the return financial year.

CUSTOMER GUIDE

Download the GST certificate PDF

Save the genuine provider document, not a recreated certificate.

1. Choose **GST Certificate** in Select GST Service.

2. Enter GST username, GSTIN and GST password required by the service. Billing keys follow prepaid/postpaid mode.

3. Choose **Get Certificate**, review the price and confirm the paid request.

4. Wait for the provider result. A supported genuine PDF is offered/downloaded; use **Download GST Certificate (PDF)** to trigger saving again.

5. Open the file from Downloads and confirm it belongs to the intended GSTIN.

Supported output

The portal handles the actual provider file or permitted URL. It does not fabricate a replacement certificate, invent contents or turn an error into a PDF. A provider failure, unexpected response or inaccessible link must be resolved before a valid certificate can be delivered.

If it will not open

Read the popup and response, then check browser Downloads. Do not rename a JSON error to .pdf. If a source link is expired, contact support with service, request time and readable error. Never send GST password or a full API key.

> **Provider availability**
> These instructions describe local application behavior. They do not certify that a taxpayer's certificate is available or that the GST/provider source is online. Wait for recovery when the source is unavailable rather than repeatedly initiating paid calls.

No month or financial-year selection is needed for the certificate form. A registration certificate is not a monthly return. Save the response promptly before the short-lived page response is cleared.

CUSTOMER GUIDE

History, profile and statements

Reconcile credit, usage and current billing details.

1. Open **My Account** and locate Wallet Transaction History or API Charges / API Usage History.

2. Choose **From date** and **To date**; both are included using IST.

3. Select **Download Excel** and check the saved workbook and date range.

4. Postpaid users can use a month's **Billing Statements** action to download a usage statement in CSV format.

History kind	Meaning
signup-bonus / paid-recharge	Promotional award / independently verified payment credit.
admin-credit / admin-debit	Admin grant / balance correction; not a bank refund.
api-reservation	Funds held for a confirmed request.
reservation-reversal	Release of the relevant API reservation.
refund-hold / refund-release	Requested refund held / unapproved funds released.

Profile and GST billing

Profile displays registered name, email, mobile and company. Billing Details accepts Indian state code and optional billing GSTIN. **Save billing details** affects future transactions; old tax snapshots stay unchanged. Admin can review, edit or delete current billing GST details.

Reconcile the right totals

The visible account lists are recent history, not necessarily all transactions. Balance can differ from paid credits minus finalized charges because of bonuses, reservations, corrections and refunds. Use dated exports and ask Admin about unresolved items.

Current service prices are displayed in My Account. Standard rates can change when Admin updates them. Special fixed rates remain protected until Admin changes or resets them.

CUSTOMER GUIDE

Request a wallet refund

Both the portal form and a separate email are mandatory.

1. Open **My Account > Request a Refund** and review eligible unused paid balance.

2. Enter requested amount, refund UPI ID and a detailed valid reason. Tick the separate-email acknowledgment.

3. Choose **Submit refund request** and retain the displayed request ID. The requested amount is held and unavailable to spend.

4. Personally email **support@primeserve.in**, quoting that ID and complete details. The portal does not send this email for you.

5. Monitor Refund Requests. Admin checks original paid credits and remaining funds, then approves a final amount or rejects the request.

6. Admin transfers approved money manually. Paid status/reference are recorded only after the transfer succeeds.

Your email must contain

Full name, registered email, company, original payment UTR/reference, requested amount, refund UPI ID, portal refund ID and valid reason. Never send passwords, OTPs or UPI PINs.

Status	Meaning
Pending	Portal request exists; the separate email is still mandatory.
Approved	An amount was approved; it does not yet mean money was sent.
Rejected	The hold is released; read the review reason.
Paid	Admin recorded a successful manual transfer reference.

Eligibility and partial approval
Only eligible unused paid recharge funds qualify. Bonuses and Admin grants are not refundable. Usage, corrections and holds reduce eligibility. One open request is allowed at a time. Unapproved money returns to the wallet; no full-amount approval or completion time is guaranteed.

Read **Refund Policy** in the footer. Re-consent after privacy withdrawal does not itself approve, cancel or initiate a refund.

CUSTOMER GUIDE

Troubleshooting and safe support

Read the reason before trying the same request again.

Problem	Recommended action
Login rejected / blocked	Check credentials. Correct credentials on a blocked account show Admin's reason. Only Admin can unblock it.
Email OTP missing / unavailable	Check address and spam. Respect resend limits; contact support if sending is unavailable.
GST OTP invalid / expired	Use the latest code for the right GST account. Request a fresh code only as needed.
Insufficient wallet / credit	Prepaid: add money and await approval. Postpaid: ask Admin to review credit/outstanding.
HTTP 400 / source unavailable	Check input and GST API access. Source downtime or validation may also be responsible.
File unavailable / expired link	Check status and retention; ask support before a new paid initiation.
Consent required	Use My Account > Privacy & Consent. Consent/re-consent needs no Admin approval.

What to send support

Use **support@primeserve.in**. Include registered email, company, service, request time in IST, job/request ID and readable error. Include GSTIN only when needed to investigate. Redact passwords, API keys and OTPs from screenshots.

Everyday security

Use your own account, verify the site and payee, log out on shared devices and protect downloaded taxpayer files. A browser download alert is different from a portal error popup. Mobile tables can require horizontal scrolling.

Avoid duplicate paid calls
A timeout may happen after provider acceptance. Let Admin verify the held outcome before reinitiating. Resume checks monitors an existing job rather than requesting fresh return data.

REFERENCE

Quick lookup and support

Common customer questions, terms and contact details.

Question	Where / answer
Where do I add money?	My Account > Add Money: scan QR, pay and submit amount/UTR.
When is payment credited?	After Admin independently verifies receipt and approves the recharge.
Where are my files?	Browser/device Downloads. Save promptly within the retention window.
Can I choose my own billing mode?	No. Admin assigns PREPAID or POSTPAID and credit terms.
Why did my price change?	Standard rates follow Admin updates; special rates remain protected until individually changed.
Consent every login/download?	No. Once for the stated purposes/version.
Can I consent again myself?	Yes, in My Account. No Admin approval is required.
How do I request a refund?	Submit the portal request AND personally email complete details and reason to support.
Does approved mean refund received?	No. Paid status is recorded after a successful manual transfer.

Essential terms

GSTIN: taxpayer identifier. **UTR:** bank/UPI reference. **Job ID:** provider processing identifier. **Hold:** funds unavailable while a request is reviewed. **Special rate:** protected client/service price. **Consent:** recorded choice for the stated purposes.

Need assistance?

Email **support@primeserve.in** with registered email, company, service, time in IST and job/request ID. Include readable errors and only the GST details needed for investigation. Never send passwords, OTPs, API keys or UPI PINs.

Version 1.0 | 4 November 2026 | Primeserve Global Solution Private Limited. Prepared against the current local customer workflows. Ask for an updated guide if the application changes.
